As you suspected, several of the items in  memorandum about the monthly Federal Records Officers meeting are interesting. I would be interested in knowing more about the paper research study planned by the Bureau of Standards. I assume we will learn a lot more about it if someone is going to ask the Agency to contribute financial support but there must be some minimum information you can collect about it before that solicitation arrives. 

ILLEGIB

I would also be interested in knowing more about the archival magnetic tape subject. I am reasonably sure we do have such tapes, or we might be able to store tapes instead of hard copy on such things as the staffing complement of the Agency. It would also be interesting to know what NARS is doing or thinking about the magnetic tape to microfilm conversion which RID has installed.
